1 What Is Ibeacon 2 What Are Ibeacons Cisco

Ibeacon is a protocol developed by Apple and introduced at the Apple Worldwide Developers Conference in 2013. Various vendors have since made Ibeacon-compatible hardware transmitters – typically called beacons – a class of Bluetooth Low Energy devices that broadcast their identifier to nearby portable electronic devices. The technology enables smartphones, tablets and other devices to perform actions when in proximity to an Ibeacon. Ibeacon is based on Bluetooth low energy proximity ...

Ibeacon - Wikipedia

Major: This is a 2 byte string used to distinguish a smaller subset of beacons within the larger group. For example, if Coca-Cola had four beacons in a particular grocery store, all four would have the same Major. This allows Coca-Cola to know exactly which store its customer is in. Minor: This is a 2 byte string meant to identify individual beacons. Keeping with the Coca-Cola example, a beacon at the front of the store would have its own unique Minor.
