

# Database Backup And Recovery Cgi

The recovery model of database determines its backup and restore requirements. restore A multi-phase process that copies all the data and log pages from a specified SQL Server backup to a specified database, and then rolls forward all the transactions that are logged in the backup by applying logged changes to bring the data forward in time.

There are two ways to perform Oracle backup and recovery: Recovery Manager and user-managed backup and recovery. Recovery Manager (RMAN) is an Oracle utility that can back up, restore, and recover database files. It is a feature of the Oracle database server and does not require separate installation.
